

NATURA IMPACT REPORT - APPENDIX I

SUMMARY DETAILS OF ALL EUROPEAN SITES CONSIDERED DURING THE APPROPRIATE ASSESSMENT

IN SUPPORT OF THE
APPROPRIATE ASSESSMENT

OF THE
DRAFT TRANSPORT STRATEGY
FOR THE
GREATER DUBLIN AREA
2016-2035

IN ACCORDANCE WITH THE REQUIREMENTS OF
ARTICLE 6(3) OF THE EU HABITATS DIRECTIVE

for: National Transport Authority

Dún Scéine,
Iveagh Court,
Harcourt Lane,
Dublin 2

by: CAAS Ltd.

2nd Floor, The Courtyard,
25 Great Strand Street,
Dublin 1

OCTOBER 2015

Introduction

This appendix presents background summary data relating to each European site (cSACs and SPAs) that were considered during the Appropriate Assessment of the Draft Transport Strategy for the Greater Dublin Area 2016-2035. Data presented has been collated from various sources made available by the National Parks and Wildlife Service (NPWS) of the Department of Arts, Heritage and the Gaeltacht.

Sites are presented in two separate lists, firstly SACs and secondly SPAs. All sites within each list are sorted according to NPWS Site Code.

The principal sources of information include the following:

- *Site Synopses*
- *NATURA 2000 Standard Data Forms*
- *Conservation Objective (Generic Versions)*
- *Detailed Site Specific Conservation Objectives and supporting documents (where available)*

Data presented on each site includes:

- *Site Name*
- *Site Code*
- *County*
- *SSCO Published or not (as of August 2015)*
- *Location relevant to the Strategy area*
- *Previously reported threats*
- *Qualifying Interests (QIs) in the case of SACs:*
 - *Listed Annex I habitats for which site is selected - abbreviated version as used by NPWS (2013)¹*
 - *Listed Annex II species for which site is selected - common english name*
- *Special Conservation Interests (SCIs) in the case of SPAs:*
 - *Listed Annex I birds for which site is selected (Annex I SCIs) - common english name*
 - *Non – annex birds for which site is selected (Non Annex I SCIs) - common english name*

¹ NPWS (2013). The Status of EU Protected Habitats and Species in Ireland. Overview Volume I. Unpublished Report, National Parks and Wildlife Services.

Summary data relating to all relevant cSACs sorted according to site name

Site Name: Killyconny Bog (Cloghbally) SAC

Site Code: 000006

County (s): Cavan, Meath

SSCOs Published: No

Location: Within study area

Threats

This site is especially vulnerable to the effects of peat cutting and drainage which are causing water loss and an overall deterioration in habitat quality. The cutover margins are vulnerable to agricultural reclamation.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

Degraded raised bogs

Raised bog (active)*

Site Name: Baldoyle Bay SAC

Site Code: 000199

County (s): Dublin

SSCOs Published: Yes

Location: Within study area

Threats

A substantial part of the site is a Nature Reserve and is not significantly threatened in any way. The part of the site at the Mayne River, outside of the Nature Reserve, has been proposed for development in the past and is still considered to be under threat. The site receives pollution from a number of sources, chiefly the inflowing rivers but also an unsatisfactory sewage network. A new sewage works has been planned. Bait digging and controlled wildfowling may be problems. Spartina is well established in the inner estuary and may be causing unfavourable interactions with the intertidal and salt marsh habitats. Sterna albifrons formerly nested but regular disturbance is a problem.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

Atlantic salt meadows

Mediterranean salt meadows

Salicornia mud

Tidal mudflats

Site Name: Howth Head SAC

Site Code: 000202

County (s): Dublin

SSCOs Published: No

Location: Within study area

Threats

At present the only threats are control of heath fires and possibly excess visitors. In future the growth of Dublin may increase visitor pressure and possibly air pollution. Overfishing in the Irish Sea may affect sea bird numbers.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

Dry heaths

Sea cliffs

Site Name: Lambay Island SAC

Site Code: 000204

County (s): Dublin

SSCOs Published: Yes

Location: Within 5km of study area

Threats

The island has been maintained as a wildlife sanctuary by its owners for all of this century. No threats are envisaged should the present landuse continue. Rodents may be causing some damage to burrow nesting seabirds. There is some over-fishing in the marine areas.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

Sea cliffs

Common Seal

Grey Seal

Site Name: Malahide Estuary SAC

Site Code: 000205

County (s): Dublin

SSCOs Published: Yes

Location: Within study area

Threats

The main problems or threats affecting this site are recreational activities, water pollution and infilling. Owing to the proximity of two large towns, the area is very popular for water sports and other amenity activities. These can disturb the bird populations and impact on the dune habitats, and the intensity of such activities is likely to increase in the future. Pollution, mostly nutrients, enters the system from the Broadmeadows River and from sewage plants at Swords and Malahide. The inner estuary is particularly affected owing to its lagoonal character. The efficiency of the sewage plants may be upgraded in the future. Parts of the estuary have been infilled in the past for various developments and this remains a threat.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

- Atlantic salt meadows
- Fixed dunes (grey dunes)*
- Marram dunes (white dunes)
- Mediterranean salt meadows
- Salicornia mud
- Spartinion
- Tidal mudflats

-

Site Name: North Dublin Bay SAC

Site Code: 000206

County (s): Dublin

SSCOs Published: No

Location: Within study area

Threats

Dunes are subject to high recreational pressures and moderate levels of grazing by rabbits which cause some localised damage. Damaged areas, however, are monitored by Dublin Corporation and appropriate management implemented. Abstraction of water by the golf clubs could result in a lowering of the water table which could affect the humid dune slacks. Any extensions to the two golf courses would be deleterious. The intertidal areas receive polluted water though there are no apparent significant impacts on the associated flora and fauna. Owing to its location in Dublin Bay, pollution such as oil spillages from Dublin Port and shipping is a threat. Commercial bait digging is a problem and causes disturbance to wintering birds.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

- Atlantic salt meadows
- Drift lines
- Dune slack
- Embryonic shifting dunes
- Fixed dunes (grey dunes)*
- Marram dunes (white dunes)
- Mediterranean salt meadows
- Salicornia mud
- Tidal mudflats

- Petalwort

Site Name: Rogerstown Estuary SAC

Site Code: 000208

County (s): Dublin

SSCOs Published: Yes

Location: Within study area

Threats

A significant part of estuary (intertidal flats and salt marsh) has been lost due to landfilling and this remains a threat. Landfill site is also a major source of pollution to estuary. Other sources of pollution include input of raw sewage from a local town and general pollution inputs from a rich agricultural hinterland. Dunes at site are considered to be in a highly vulnerable state due to a combination of natural (i.e. erosion) and anthropogenic factors. Erosion has removed much of nesting area of *Sterna albifrons*.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

Atlantic salt meadows
Estuaries
Fixed dunes (grey dunes)*
Marram dunes (white dunes)
Mediterranean salt meadows
Salicornia mud
Tidal mudflats

Site Name: South Dublin Bay SAC

Site Code: 000210

County (s): Dublin

SSCOs Published: Yes

Location: Within 5km of study area

Threats

The main threat to this site is further reclamation for industrial and/or infrastructural purposes. The intertidal areas receive water that is somewhat polluted though there are no apparent impacts on the associated flora and fauna. Owing to its location in Dublin Bay, pollution such as oil spillages from Dublin Port and shipping is a threat. Commercial bait digging may be a problem and causes disturbance to wintering birds. Disturbance to birds is also caused by walkers and dogs.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

Tidal mudflats

Site Name: Ballynafagh Bog SAC

Site Code: 000391

County (s): Kildare

SSCOs Published: No

Location: Within study area

Threats

The wettest section of this site is probably protected at present, as it is located in a subsidence hollow. However ongoing peat cutting threatens its long term viability. Old and recent drains are increasing water loss. A recent fire event on the SW has increased surface water run-off. Further afforestation on the bog would be very damaging.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

Degraded raised bogs
Raised bog (active)*
Rhyncosporion depressions

Site Name: Pollardstown Fen SAC

Site Code: 000396

County (s): Kildare

SSCOs Published: No

Location: Within study area

Threats

Largely protected as a nature reserve, the site is nonetheless vulnerable to interference with the Curragh aquifer.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

Alkaline fens
Cladium fen*
Petrifying springs*

Desmoulin's whorl snail
Gever's whorl snail
Narrow-mouthed whorl snail

Site Name: Red Bog, Kildare SAC

Site Code: 000397

County (s): Kildare

SSCOs Published: No

Location: Within study area

Threats

A main threat to this site is lowering of water table due to nearby quarrying operations. It is not known if this has already happened. The hydrology of the site could also be affected by direct drainage attempts. Agricultural run-off is likely to be entering the site from surrounding areas though the effects of this are unknown.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

Transition mires

Site Name: Dundalk Bay SAC

Site Code: 000455

County (s): Louth

SSCOs Published: Yes

Location: Within 15km of study area

Threats

Water pollution, derived from both agricultural and domestic/industrial sources, is the principal threat to the quality of the habitats in the inner part of this site. A new sewage treatment works at Dundalk town, due to come into commission in 2000, will partly alleviate the problem. Localised infilling and dumping has occurred in the past, especially near Dundalk town, and this remains a threat to the shoreline habitats. Aquaculture may occur in the future as a feasibility study has been carried out. This activity would need to be controlled to avoid significant disturbance to habitats and bird populations. Spartina is well established and may threaten the estuarine habitats.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

Atlantic salt meadows

Estuaries

Mediterranean salt meadows

Perennial vegetation of stony banks

Salicornia mud

Tidal mudflats

Site Name: Raheenmore Bog SAC

Site Code: 000582

County (s): Offaly

SSCOs Published: No

Location: Within 15km of study area

Threats

Due to the high water content of peat, raised bogs are vulnerable to drainage. A deep marginal drain surrounds most of this site which is causing drying out and subsidence. Two networks of surface drains also occur, one extensive, which are increasing water loss from the site.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

Degraded raised bogs

Raised bog (active)*

Rhynchosporion depressions

Site Name: Garriskil Bog SAC

Site Code: 000679

County (s): Westmeath

SSCOs Published: No

Location: Within 15km of study area

Threats

Raised bogs are vulnerable to water loss caused by peat cutting, drainage and fire. There is no active peat cutting at this site at present. Recent drainage is causing drying out of a section of the site to the NE. Dredging of the river Inny may have caused water loss at the S and subsequent subsidence.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

Degraded raised bogs

Raised bog (active)*

Rhynchosporion depressions

Site Name: Lough Ennell SAC

Site Code: 000685

County (s): Westmeath

SSCOs Published: No

Location: Within 15km of study area

Threats

Eutrophication, owing to sewage and fertiliser inputs, has been a problem since the 1970's. There has recently been significant improvement, however, as a result of reduction of phosphate in the effluent from Mullingar Sewage Treatment Plant, and in 1990 the water was classified as mesotrophic. Remobilisation of phosphate from the sediments of the lake is likely to continue, as well as runoff from surrounding lands. Boating activities on the lake could cause damage to the fragile Chara species.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

Alkaline fens

Site Name: Ballyman Glen SAC

Site Code: 000713

County (s): Dublin, Wicklow

SSCOs Published: No

Location: Within study area

Threats

Ballyman Glen is surrounded by intensively managed agricultural grassland and is vulnerable to nutrient run-off from this source. The petrifying springs could be threatened by over-extraction of water locally.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

Alkaline fens

Petrifying springs*

Site Name: Bray Head SAC

Site Code: 000714

County (s): Wicklow

SSCOs Published: No

Location: Within study area

Threats

The main threats to this site are reclamation of heath and grassland habitats, burning and recreational pressures. Reclamation for agriculture has occurred in the past and continues to be a threat. Burning of heath is a regular event and may be occurring too frequently. The site is a popular area for recreational activities, especially walking. Recreational pressures are likely to increase in the future owing to a growing population in surrounding areas.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

Dry heaths

Sea cliffs

Site Name: Carriggower Bog SAC

Site Code: 000716

County (s): Wicklow

SSCOs Published: No

Location: Within study area

Threats

A main threat to this site is lowering of the water table due to drainage attempts. A drainage channel has already been dug at the eastern end of site though its impact on the bog is not known. Part of the site is semi-improved grassland and any intensification of grazing could be damaging. Forestry is widespread in the area and is a general threat.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

Transition mires

Site Name: Deputy's Pass Nature Reserve SAC

Site Code: 000717

County (s): Wicklow

SSCOs Published: No

Location: Within study area

Threats

G02.06 - Attraction Park - Low Rank (L) - Inside site (i)
K05 - Genetic Depression - Low Rank (L) - Inside site (i)
A04 - Grazing - Medium Rank (M) - Outside site (o)
A04 - Grazing - Low Rank (L) - Inside site (i)
B - Forestry - Medium Rank (M) - Outside (o)

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

Old oak woodlands

Site Name: Glen of the Downs SAC

Site Code: 000719

County (s): Wicklow

SSCOs Published: No

Location: Within study area

Threats

Further road widening is planned which will reduce and modify the habitats on the valley floor.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

Old oak woodlands

Site Name: Knocksink Wood SAC

Site Code: 000725

County (s): Dublin, Wicklow

SSCOs Published: No

Location: Within study area

Threats

As a popular amenity area the site is vulnerable to disturbance and littering.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

Petrifying springs*

Residual alluvial forests*

Site Name: Buckronev-Brittis Dunes and Fen SAC

Site Code: 000729

County (s): Wicklow

SSCOs Published: No

Location: Within study area

Threats

Brittis Bay dunes are subject to intensive agricultural and recreational pressures. Stocking at high densities threatens the older dunes and dune heath. The recent development of a golf course on part of Buckronev dunes may threaten the hydrology of the overall system. Buckronev fen is threatened by a general lowering of the water table through drainage and water abstraction. Further reclamation of marginal areas of the fen would be detrimental.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

Alkaline fens

Decalcified dune heath*

Drift lines

Dune slack

Dunes with creeping willow

Embryonic shifting dunes

Fixed dunes (grey dunes)*

Marram dunes (white dunes)

Mediterranean salt meadows

Perennial vegetation of stony banks

Site Name: Vale of Clara (Rathdrum Wood) SAC

Site Code: 000733

County (s): Wicklow

SSCOs Published: No

Location: Within study area

Threats

the main threat to this site is the regeneration of exotic conifers.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

Old oak woodlands

Site Name: Blackstairs Mountains SAC

Site Code: 000770

County (s): Carlow, Wexford

SSCOs Published: No

Location: Within 15km of study area

Threats

The site is particularly vulnerable to afforestation with coniferous species - much of the land surrounding the site has been planted. The site is also vulnerable to overgrazing and to uncontrolled burning.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

Dry heaths

Wet heath

Site Name: Slaney River Valley SAC

Site Code: 000781

County (s): Carlow, Wicklow, Wexford

SSCOs Published: Yes

Location: Within study area

Threats

Most of the habitats and species of ecological importance within this site are dependant on good water quality. While generally good, the system receives nutrient run-off from agricultural activities and also inputs of pollution from point sources associated with domestic and industrial activities. Any increases in the present levels of pollution could be harmful to water quality. Localised reclamation has occurred along the banks of the river and in the marginal areas of the estuary and any further reclamation is undesirable.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

Estuaries

Floating river vegetation

Old oak woodlands

Residual alluvial forests*

Tidal mudflats

Atlantic Salmon

Brook Lamprey

Common Seal

Freshwater Pearl Mussel

Otter

River Lamprey

Sea Lamprey

Twaite Shad

Site Name: The Long Derries, Edenderry SAC

Site Code: 000925

County (s): Offaly

SSCOs Published: No

Location: Within 5km of study area

Threats

The calcareous grassland on the site is particularly vulnerable to changes in the grazing and fertilization regimes. This habitat is also threatened by the encroachment of scrub and by afforestation with coniferous species. The gravel pits, sites of three of the rare plant species, are threatened by continued gravel extraction, dumping and overuse by motorbikes. The ornithological interest of the site is vulnerable to disturbance from shooting.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

Orchid-rich calcareous grassland*

Site Name: Glenasmole Valley SAC

Site Code: 001209

County (s): Dublin

SSCOs Published: No

Location: Within study area

Threats

Much of the dry calcareous grassland has been improved to some extent in recent decades by fertilisation and reseeded, and remains vulnerable to further improvement for agriculture. The Molinia meadows are also vulnerable to agricultural intensification, including drainage. There are no apparent threats to the petrifying springs.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

Molinia meadows

Orchid-rich calcareous grassland*

Petrifying springs*

Site Name: Ballynafagh Lake SAC

Site Code: 001387

County (s): Kildare

SSCOs Published: No

Location: Within study area

Threats

At present there are no significant threats to this site. Water levels in the lake have dropped over time and some management might be required to maintain open water in the future. There is a proposal to reopen the disused feeder canal - this would require raising of the water levels which would be damaging to some habitats and the Vertigo moulinsiana population. Detailed environmental impact assessment would be required before this could happen.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

Alkaline fens

Desmoulin's whorl snail

Marsh Fritillary

Site Name: Rye Water Valley/Carton SAC

Site Code: 001398

County (s): Kildare, Meath

SSCOs Published: No

Location: Within study area

Threats

The woodland section of the site is vulnerable to woodland clearance - resulting in habitat loss for some of the rare flowering plants present. The Rye Water is vulnerable to pollution - much of the surrounding land is agricultural. The petrifying spring and Vertigo species are particularly vulnerable to urban development and to dumping.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

Petrifying springs*

Desmoulin's whorl snail

Narrow-mouthed whorl snail

Site Name: Clogher Head SAC

Site Code: 001459

County (s): Louth

SSCOs Published: No

Location: Within 10km of study area

Threats

The site is vulnerable to overgrazing, land reclamation, burning and building. Since 1972 the area of heath on the headland has been reduced through building and agricultural development. Amenity use may cause local erosion.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

Dry heaths

Sea cliffs

Site Name: Kilpatrick Sandhills SAC

Site Code: 001742

County (s): Wexford

SSCOs Published: No

Location: Within 5km of study area

Threats

The main landuses which presently occur on this site are grazing by cattle and recreational activities. Grazing has not caused significant damage to date but any increases in stocking rates could threaten the stability of the dunes. There is some erosion of the dunes in the southern part of the site due to tracks leading to the beach. An increase in the numbers of visitors to the area would probably be detrimental to the site unless carefully managed.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

Decalcified dune heath*

Drift lines

Embryonic shifting dunes

Fixed dunes (grey dunes)*

Marram dunes (white dunes)

Site Name: Holdenstown Bog SAC

Site Code: 001757

County (s): Wicklow

SSCOs Published: No

Location: Within study area

Threats

The main potential threats to this site are drainage and infilling. A small amount of infilling has already occurred along the public road which skirts the northern boundary of site. A similar area of bog a little to the north has been drained and converted to grassland since the 1970s. Agricultural run-off is likely to be entering the site from surrounding areas though the effects of this are unknown.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

Transition mires

Site Name: Magherabeg Dunes SAC

Site Code: 001766

County (s): Wicklow

SSCOs Published: No

Location: Within study area

Threats

At present, this site does not appear to be vulnerable to any particular pressures. There is no public access to the area and therefore recreational pressures are low. Natural erosion is evident in the southern part of site. The dry grassland at Ardmore Point is grazed by cattle but the dunes have not been grazed in recent years.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

Decalcified dune heath*

Drift lines

Embryonic shifting dunes

Fixed dunes (grey dunes)*

Marram dunes (white dunes)

Petrifying springs*

Site Name: White Lough, Ben Loughs and Lough Doo SAC

Site Code: 001810

County (s): Meath, Westmeath

SSCOs Published: No

Location: Within study area

Threats

Attempts at agricultural improvement, which have already occurred on a small scale, is the main threat to this site. Recurrence of crayfish plague could have serious impact on the population of that species.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

Hard water lakes

White-Clawed Crayfish

Site Name: Boyne Coast and Estuary SAC

Site Code: 001957

County (s): Louth, Meath

SSCOs Published: Yes

Location: Within study area

Threats

Parts of the intertidal sand and mud flats and the salt marsh habitats have been infilled in the past and this remains a threat. Pollution enters the estuary from Drogheda town, though a sewage treatment works under construction will improve this situation. The dunes are subject to intense recreational pressures, which is likely to increase owing to a growing population in the general area.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

- Atlantic salt meadows
- Embryonic shifting dunes
- Estuaries
- Fixed dunes (grey dunes)*
- Marram dunes (white dunes)
- Mediterranean salt meadows
- Salicornia mud
- Tidal mudflats

Site Name: Lough Bane and Lough Glass SAC

Site Code: 002120

County (s): Meath, Westmeath

SSCOs Published: No

Location: Within study area

Threats

The site is vulnerable to eutrophication, mainly by run-off from surrounding agricultural fields. Some afforestation is occurring near the site - should this increase, water quality could be affected. Increased use of lake for boating could cause physical damage to Chara communities.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

- Hard water lakes

- White-Clawed Crayfish

Site Name: Lough Lene SAC

Site Code: 002121

County (s): Westmeath

SSCOs Published: No

Location: Within 5km of study area

Threats

The main threat to this site is eutrophication caused by agricultural run-off from surrounding areas. Any further reclamation of the semi-natural habitats around the lakes shore would be detrimental to the overall ecology of the lake system. Increased usage of the lake for boating and angling could cause physical damage to the Chara communities. The crayfish population is vulnerable to water pollution and to further introductions of the crayfish fungus.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

- Hard water lakes

- White-Clawed Crayfish

Site Name: Wicklow Mountains SAC

Site Code: 002122

County (s): Dublin, Wicklow

SSCOs Published: No

Location: Within study area

Threats

The main threat to the quality of habitats on the site is overgrazing by sheep, affecting the bog, heath and rocky habitats and both deer and sheep affecting the woodlands. Localised peat extraction and heavy burning is a threat to the blanket bog. The spread of non-native species is a threat to the quality of the woodlands. Many recreational activities occur within the site and some, such as hill walking and climbing, have potential for disturbance to habitats and species. Peat erosion is frequent on the peaks - this may be a natural process but is likely to be accelerated by activities such as grazing.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

Alpine and subalpine heath

Otter

Blanket bog (active)*

Calcareous rocky slopes

Dry heaths

Dystrophic lakes

Old oak woodlands

Siliceous rocky slopes

Siliceous scree

Soft water lakes with base rich influences

Species-rich nardus upland grassland*

Wet heath

Site Name: Mountmellick SAC

Site Code: 002141

County (s): Laois

SSCOs Published: No

Location: Within 10km of study area

Threats

Vertigo moulinsiana was formerly more widespread in the canal area but has disappeared from most of its recorded sites with the dredging and reopening of canal navigation channels. Area immediately west of Dangan's Bridge has been drained and is now grassland. As site is state owned, prospects are good.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

Desmoulin's whorl snail

Site Name: River Barrow and River Nore SAC

Site Code: 002162

County (s): Carlow, Kildare, Kilkenny, Laois,

SSCOs Published: Yes

Location: Within study area

Threats

30% of the site consists of water: 10% freshwater and 20% of estuarine and tidal stretches. The Annex II species listed in Section 4.2 are dependent on the quality of these waters. Much of the site along the water courses is under threat from pollution caused by increased fertiliser application, sewage and industrial waste. There is also loss of saltmeadow habitat with two legally protected species and a rare sedge, as a result of infilling and agricultural intensification. *Alosa fallax* may be vulnerable to angling pressure. Aquaculture occurs in Waterford Harbour and may be causing some disturbance to the intertidal sediments and wintering birds - intensification of aquaculture is a threat.

Habitat QIs (Annex I Habitats):

Atlantic salt meadows
Dry heaths
Estuaries
Floating river vegetation
Hydrophilous tall herb
Mediterranean salt meadows
Old oak woodlands
Petrifying springs*
Residual alluvial forests*
Salicornia mud
Tidal mudflats

Species QIs (Annex II Species):

Atlantic Salmon
Brook Lamprey
Desmoulin's whorl snail
Freshwater Pearl Mussel
Irish Freshwater Pearl Mussel
Killarney Fern
Otter
River Lamprey
Sea Lamprey
Twaite Shad
White-Clawed Crayfish

Site Name: Ireland's Eye SAC

Site Code: 002193

County (s):

SSCOs Published: No

Location: Within 5km of study area

Threats

The main threat to the island would be an increase in the numbers of visitors to the island. This could impact upon the more sensitive sandy habitats and cause disturbance to the breeding seabirds.

Habitat QIs (Annex I Habitats):

Perennial vegetation of stony banks
Sea cliffs

Species QIs (Annex II Species):

Site Name: The Murrough Wetlands SAC

Site Code: 002249

County (s): Wicklow

SSCOs Published: No

Location: Within study area

Threats

Drainage, building of an embankment, reclamation, levelling of sandhills and afforestation have already affected the habitats. Further works pose a threat to these. The water quality of inflowing streams may be reduced as a result of agricultural intensification outside of the site. Housing development is becoming a feature at the edge of the site. Access and recreational pressure is affecting the vegetation of the shingle shore, this will also cause disturbance to birds.

Habitat QIs (Annex I Habitats):

Alkaline fens
Atlantic salt meadows
Cladium fen*
Drift lines
Mediterranean salt meadows
Perennial vegetation of stony banks

Species QIs (Annex II Species):

Site Name: Ballyprior Grassland SAC

Site Code: 002256

County (s): Laois

SSCOs Published: No

Location: Within 5km of study area

Threats

Due to recent division of the lands between seven new owners, the site is vulnerable to habitat damage (clearance of scrub, surface rock, soil and vegetation disturbance) and subsequent improvement by harrowing, re-seeding and fertilising. Such efforts at 'improvement' are already occurring within and around the site. Adjacent grassland habitat has been lost also to afforestation in recent years, to the south. Appropriate grazing management is essential for conservation of this habitat; the site flora is therefore vulnerable to adverse changes in the grazing regime and also to encroachment by scrub and bracken.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

Orchid-rich calcareous grassland*

Site Name: Wicklow Reef SAC

Site Code: 002274

County (s): Wicklow

SSCOs Published: Yes

Location: Within 5km of study area

Threats

This reef is vulnerable to any mechanical disturbance by pots and in particular fishing gear being dragged across the surface of the reef. If only a small part of the reef is disturbed, and this disturbance is not repeated with any frequency, the reef should be able to repair itself.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

Reefs

Site Name: River Boyne and River Blackwater SAC

Site Code: 002299

County (s): Cavan, Meath, Louth, Westmeath

SSCOs Published: No

Location: Within study area

Threats

Main threats to the ecological interests of this site are further drainage schemes and water pollution. In the past, where drainage occurred it altered the character of the river and removed natural bankside structure and vegetation. Ongoing maintenance dredging is carried out along stretches of the river system where the gradient is low. This can be extremely destructive to salmonid habitat. Drainage also impacts on the many small wetland areas throughout the site. Water quality is impaired in parts of the system through agricultural runoff and inputs from domestic and industrial sources. A reduction in the input of pollutants to the system is required to preserve the important aquatic interests in this site.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

Alkaline fens

Atlantic Salmon

Residual alluvial forests*

Otter

River Lamprey

Site Name: Mouds Bog SAC

Site Code: 002331

County (s): Kildare

SSCOs Published: No

Location: Within study area

Threats

The main threat to the hydrology of this site is the extensive area of industrial cutting which is affecting the western part of the high bog. Peat-cutting for domestic purposes also still continues on a small scale. The ongoing removal of peat and the associated drainage if continued could threaten the long-term viability of the remaining high bog. The surface of the bog appears to be burned regularly and this is impairing the functioning of the acrotelm by damaging the peat-forming Sphagnum cover. Further burning would be damaging.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

Degraded raised bogs

Raised bog (active)*

Rhynchosporion depressions

Site Name: Moneybeg and Clareisland Bogs SAC

Site Code: 002340

County (s): Meath, Westmeath

SSCOs Published: No

Location: Within 5km of study area

Threats

The main threats to the site are peat-cutting and associated activities such as drainage and burning. It must be noted however that the intensity of such damages appears to be relatively low at present in comparison to many other Irish raised bog sites. Agricultural reclamation and afforestation are potential threats to cutover areas of bog within the site. Burning events would damage the surface of the bogs.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

Degraded raised bogs

Raised bog (active)*

Rhynchosporion depressions

Site Name: Ardagullion Bog SAC

Site Code: 002341

County (s): Longford

SSCOs Published: No

Location: Within 15km of study area

Threats

The site continues to be subject to threats to its hydrological integrity. The main threat is drying out of the surface due to forestry, however much of the forestry in the cutover margins of the site has been felled recently. Although active peat cutting occurs, the intensity is relatively low in comparison to other raised bog sites in Ireland. A large proportion of the site is in semistate ownership.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

Degraded raised bogs

Raised bog (active)*

Rhynchosporion depressions

Site Name: Mount Hevey Bog SAC

Site Code: 002342

County (s): Meath, Westmeath

SSCOs Published: No

Location: Within study area

Threats

In the past this site was subject to extensive peat-cutting. More recently there has been afforestation in the south-eastern corner of the site. Both of these damaging operations have resulted in the drying-out of the high bog area. Unless peat-cutting is curtailed and the areas of forestry are removed, the site will continue to be vulnerable to drying out. Any intensification of these activities could be very damaging. The drier areas of the high bog surface are vulnerable to burning events which, if intense, can be very damaging.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

Degraded raised bogs

Raised bog (active)*

Rhynchosporion depressions

Site Name: Rockabill to Dalkey Island SAC

Site Code: 003000

County (s): Dublin

SSCOs Published: Yes

Location: Within 5km of study area

Threats

Rockabill to Dalkey Island cSAC is designated for reefs and Harbour Porpoise. The resilience/recoverability of reefs is very low and even small levels of pressure, particularly from fishing, have the potential to affect ecological quality. Harbour Porpoise are vulnerable to a range of threats and pressures in their natural habitat, including accidental entanglement in fishing gear, competition for prey resources, pollution and other habitat degradation, and from disturbance from human activities.

Habitat QIs (Annex I Habitats):

Species QIs (Annex II Species):

Reefs

Harbour Porpoise

Reefs

Summary data relating to all relevant SPAs sorted according to site name

Site Name: North Bull Island SPA

Site Code: 004006

County (s): Dublin

SSCOs Published: Yes

Location: Within 5km of study area

Threats

Owing to the various conservation designations, there are no serious imminent threats to the wintering birds. However, due to its location in Dublin Bay, pollution such as oil spillages from Dublin Port and shipping is a general threat. Also, the intertidal areas receive polluted water though there are no apparent significant impacts on the associated flora and fauna. Commercial bait digging is a localised activity and causes disturbance to wintering birds. There is also some disturbance from walkers, free-running dogs, and sailing activities. There is high disturbance from amenity activities which is probably responsible for the abandonment of the site by *Sterna albifrons*.

Common Tern

Corncrake

Non-annex SCIs:

Purple Sandpiper

Site Name: Rogerstown Estuary SPA

Site Code: 004015

County (s): Dublin

SSCOs Published: Yes

Location: Within study area

Threats

A significant part of the estuary (intertidal flats and salt marsh) has been lost due to landfilling; while this remains a threat it is unlikely because of the site's various conservation designations. The landfill site is a major source of pollution to the estuary. Other sources of pollution include input of raw sewage from a local town and general pollution inputs from a rich agricultural hinterland. Erosion has removed much of the nesting area of *Sterna albifrons*. Illegal shooting causes disturbance to wintering waterfowl.

Wetlands & Waterbirds

Site Name: Baldoyle Bay SPA

Site Code: 004016

County (s): Dublin

SSCOs Published: Yes

Location: Within study area

Threats

The majority of the site is a Nature Reserve and is not threatened. The site receives pollution from a number of sources, chiefly the inflowing rivers and, until recently, an unsatisfactory sewage network. Bait digging and controlled wildfowling may be problems. *Spartina* is well established in the inner estuary and may be causing unfavourable interactions with the intertidal and salt marsh habitats. *Sterna albifrons* formerly nested but regular disturbance from walkers and dogs is a problem.

Wetlands & Waterbirds

Site Name: Malahide Estuary SPA

Site Code: 004025

County (s): Dublin

SSCOs Published: Yes

Location: Within study area

Threats

The main problems or threats affecting this site are recreational activities, water pollution and infilling. Owing to the proximity of two large towns, the area is very popular for water sports and other amenity activities. These can cause disturbance to the bird populations - the intensity of such activities is likely to increase in the future. Pollution enters the system from the Broadmeadow River and from sewage plants at Swords and Malahide, and the inner estuary is particularly affected owing to its lagoonal character. The efficiency of the sewage plants may be upgraded in the future. Parts of the estuary have been infilled in the past for various developments, including housing and walk-ways, and this remains a threat.

Site Name: Dundalk Bay SPA

Site Code: 004026

County (s): Louth

SSCOs Published: Yes

Location: Within 15km of study area

Threats

The intertidal areas receive polluted water though there are no apparent significant impacts on the associated flora and fauna. Oil pollution from Dundalk Port is a general threat. Localised infilling and dumping has occurred in the past, especially near Dundalk town, and this remains a threat to the shoreline habitats. Aquaculture may occur in the future as a feasibility study has been carried out. This activity would need to be controlled to avoid significant disturbance to habitats and bird populations. There is some disturbance from walkers, free-running dogs, sailing activities and bait-digging. Spartina is well established and may threaten the estuarine habitats.

Wetlands & Waterbirds

Site Name: Wicklow Mountains SPA

Site Code: 004040

County (s): Wicklow

SSCOs Published: No

Location: Within study area

Threats

As the site is largely State-owned and within a National Park, there are no significant threats to the bird populations. Some of the peatland habitats are affected by overgrazing by sheep, whilst both deer and sheep reduce regeneration within the woodlands. Localised peat extraction and burning is a threat to the blanket bog and heath habitats. Many recreational activities occur within the site and some, such as hill walking and climbing, could have potential for disturbance to habitats and species if not properly controlled.

Non-annex SCIs:

Site Name: Lough Derravaragh SPA

Site Code: 004043

County (s): Westmeath

SSCOs Published: No

Location: Within 10km of study area

Threats

Lough Derravaragh is classified as a mesotrophic system, with increased planktonic algal growth recorded in 2000. Enrichment of the lake, mainly by agricultural run-off, is a threat and could affect the bird populations and especially the diving duck. An increase in recreational and wildfowling activities could cause disturbance to the birds though this is not considered to be a major threat.

Pochard

Tufted Duck

Wetlands & Waterbirds

Site Name: Lough Ennell SPA

Site Code: 004044

County (s): Westmeath

SSCOs Published: No

Location: Within 15km of study area

Threats

Lough Ennell is very vulnerable to pollution from agricultural and domestic sources though water quality has been satisfactory in recent years. A deterioration in water quality could affect bird populations (as shown by marked fluctuations in some populations in the past). Lough Ennell is an important amenity area, much used for fishing, boating and camping. Sections of the shoreline are managed for visitor access and amenity. Increases in such recreational activities could cause disturbance to the birds.

SCIs (Annex I):

Non-annex SCIs:

Coot

Tufted Duck

Wetlands & Waterbirds

Site Name: Lough Kinale & Derragh Lough SPA

Site Code: 004061

County (s): Cavan, Longford, Westmeath

SSCOs Published: No

Location: Within 5km of study area

Threats

The variable water quality over the years, with periods of highly eutrophic conditions, undoubtedly has had some adverse impacts on the wintering waterfowl and especially the diving duck. This would appear to be borne out by very variable numbers of birds recorded over the years. The lake is still vulnerable to pollution and it is considered there is urgent need to reduce the phosphorus inputs to the system. Afforestation has taken place close to parts of the shoreline and further planting would be undesirable. Angling and wildfowling activities currently cause some disturbance to the birds and any increase in such activities would be of concern.

SCIs (Annex I):

Non-annex SCIs:

Pochard

Tufted Duck

Wetlands & Waterbirds

Site Name: Poulaphouca Reservoir SPA

Site Code: 004063

County (s): Kildare, Wicklow

SSCOs Published: No

Site Name: Lambay Island SPA

Site Code: 004069

County (s): Dublin

SSCOs Published: No

Location: Within 5km of study area

Threats

Lambay has essentially been maintained as a wildlife sanctuary by its owners since the early 20th century. As access is strictly controlled, there is very little disturbance to the breeding or wintering birds. The present landuse is conducive for wintering geese. The presence of rats (both *Rattus norvegicus* and *R. rattus*) may be having detrimental effects on burrowing seabirds. Over-fishing in the surrounding seas could affect the food supplies of some of the seabirds. As Lambay is close to major shipping lanes, oil pollution is always a threat.

Site Name: Stabannan - Braganstown SPA

Site Code: 004091

County (s): Louth

SSCOs Published: No

Location: Within 10km of study area

Threats

While the site is privately owned and actively farmed, there are no threats as there is a management agreement in place to benefit the waterfowl. In the longterm, possible changes in agricultural practices could be detrimental to the wintering birds.

SCIs (Annex I):

Non-annex SCIs:

Greylag Goose

Site Name: Garriskil Bog SPA

Site Code: 004102

County (s): Westmeath

SSCOs Published: No

Location: Within 10km of study area

Threats

There is little active peat cutting taking place at this site and recent information suggests that fire damage has been slight recently. The apparent abandonment of the site by wintering Anser albifrons flavirostris reflects a general move away from raised bogs and is not considered to be due to conditions at the site.

SCIs (Annex I):

Non-annex SCIs:

Greenland White-fronted Goose

Site Name: Howth Head Coast SPA

Site Code: 004113

County (s): Dublin

SSCOs Published: No

Location: Within 5km of study area

Threats

Despite the high numbers of casual visitors to the site, there does not appear to be any significant disturbance to the seabird colonies (some of which are on inaccessible cliff faces). Over-fishing in local waters could put pressure on food supplies for the birds.

SCIs (Annex I):

Non-annex SCIs:

Kittiwake

Site Name: Ireland's Eye SPA

Site Code: 004117

County (s): Dublin

SSCOs Published: No

Location: Within 5km of study area

Threats

Ireland's Eye is a popular site for day trippers though at present there does not seem to be any adverse impacts on the nesting seabirds (most of which are on relatively inaccessible cliffs). However, further increases in the numbers of visitors could cause disturbance to some of the nesting birds. High populations of rats could be detrimental to the growth of the *Fratercula arctica* colony. Nesting *Falco peregrinus* are disturbed in some years.

Wetlands & Waterbirds

Site Name: Dalkey Island SPA

Site Code: 004172

County (s): Dublin

SSCOs Published: No

Location: Within 5km of study area

Threats

Traditionally, the nesting terns are vulnerable to severe weather, predation and disturbance and breeding success has often been low. Since 1995 a conservation programme, co-ordinated by BirdWatch Ireland / National Parks and Wildlife Service, has aimed at improving conditions for the terns with the provision of nest boxes and shelters, some wardening and monitoring of productivity. This has led to more successful breeding and is likely to have been responsible for attracting *Sterna dougallii* to breed.

Arctic Tern

Common Tern

Roseate Tern

Non-annex SCIs:

Site Name: The Murrough SPA

Site Code: 004186

County (s): Wicklow

SSCOs Published: No

Location: Within study area

Threats

The proximity of the site to Wicklow town and Kilcoole village is a threat in that there is pressure on the area for housing and increased disturbance. From that flows the risk of water pollution. It is suspected that the system is receiving high nutrient loading from the surrounding farmland. Access and recreational pressure is affecting the vegetation of the shingle shore which, in turn, causes disturbance to birds. The inclusion of the BirdWatch reserve and the state-owned foreshore in the site gives additional protection.
